ACQ – Universal's Next Generation of Preserved Lumber Products

With 24 wood treating facilities strategically located throughout North America, builders have come to trust and depend on Universal Forest Products for all their treated lumber needs. Our dedicated staff of scientists utilize the latest advances in wood preservation technology to provide treated lumber products that stand up to wood's natural enemies yet are safe for humans, animals and the environment.

Alkaline Copper Quaternary (ACQ) is the newest advance in wood preservation, and Universal utilizes this safe and effective wood preservative in all of our outdoor products including dimensional lumber, decking, deck accessories, fencing, lattice and picnic table kits.

- Alkaline Copper Quaternary (ACQ) products are durable and ideally suited for outdoor construction in residential, commercial and agricultural applications as well as fresh water immersion applications.
- A copper-based preservative with a co-biocide additive adds extra protection against fungus, rot and wood boring insects.
- ACQ lumber is clean, odorless, non-staining and non-irritating to humans, animals and plants.
- Backed by a lifetime limited warranty against structural damage caused by fungal decay and termites.
- It's the best alternative to traditional CCA treated wood.
- ACQ preserved lumber can be used for structural lumber, sill plates, outdoor furniture, playground equipment, patios, decks, fencing and railings, garden edging, boardwalks, piers, marinas, bridges and various landscaping structures.
- Meets all building code requirements.
- Preservatives in ACQ products meet the American Wood-Preservers Association standards.
