### BREATHE EASY

Unlike some fiber cement products, vinyl siding does not produce harmful silica dust — silica dust can cause lung disease.

**OIL CAN TEST** Siding panels are placed under heat strips and saturated to 120° - 140°F to make sure the siding doesn't warp or buckle.

**GLOSS TEST** A digital readout microgloss meter is used to scan siding to determine if its gloss falls within a target range. Gloss is important to the aesthetic appeal of the siding.
